

ITEM 80A/14

SUBJECT: AMPLIFIER TESTERS
MODELS: All

Jaguar Rover Triumph Inc., in conjunction with Lucas USA, is pleased to announce the availability of a new, revolutionary electronic ignition analyser. The Lucas Electronic Ignition Analyser has been developed to diagnose malfunctions in 4, 6, 8 and 12 cylinder induction discharge and constant energy systems as fitted to Jaguar Rover Triumph vehicles. It will test not only Lucas units but also induction discharge systems in many other vehicles including Toyota, Datsun, VW, Audi, Fiat, Rolls Royce, Aston Martin, etc.

One of the many unique features of the Lucas Electronic Ignition Analyser is that it can be used to test intermittent ignition problems while driving the vehicle on the road. The unit will store the failure information which can be played back as needed. This feature eliminates the guesswork and expense of fitting an amplifier "just in case". Complete hook-up takes just a minute by following the complete instructions printed on the top of the tester itself.

With the hundreds of thousands of vehicles equipped with inductive discharge systems and constant energy units on the road in the US and Canada, there will be many opportunities to use the Lucas tester. The use of the proper equipment will greatly reduce owner dissatisfaction with the often unnecessary cost of amplifier replacement. Use of proper equipment will also reduce dealer cost when "No Fault Found" amplifier units are returned. In the future, a debit will be raised for "No Fault Found" units during the vehicle warranty period. This tester is considered to be minimum dealer requirement equipment for all warranty work. The unit is described more fully in the enclosed brochure.

ORDERING

The ignition analyser, P/N 60973065, can be ordered by completing the form at the bottom of this page and sending it to your Zone office or by ordering as a normal part through your Jaguar Rover Triumph Zone parts department on a normal stock order at a price of \$285.00 each.
