SUBJECT: RADIO INSTALLATION TR7 30th ANNIVERSARY MODEL

MODELS: TR7

A special new auto-reverse cassette radio, part number BLM-105092, is being supplied for installation in dealer stock TR7 convertibles as part of the 30th anniversary model. As this radio is slightly longer (deeper) than the earlier models, care must be taken to see that the wiring harness is clear of the back of the radio when inserted into the dash, to avoid pinched wires.

In addition, due to the longer (deeper) chassis, there can possibly be some interference with the insulation pad (up to $\frac{1}{4}$ " thick) on the transmission tunnel and the bottom of the radio. On some vehicles, it is necessary to remove a small section of the insulation, even with the bottom of the radio, to permit the radio to be installed flush in the dash.
